

Introduction

9i Solutions was founded in 2005 to develop software – hardware-integrated solutions offering innovative information and communication technology applications and product development services. An international class work place, a highly motivated work force of 45 in-house team, a mature management team and an impressive list of clients have all quickly lead 9i to its road to success.

One of the most important trends of the new times has been the demand on companies to understand varied technologies, make sense of multiple protocols, and develop seamless solutions so mat they can leverage it to increase market share.

This is where technology integration comes in to the picture; companies today need to find partners that will leverage existing technology investments and in a manner of speaking “build bridges” with new technologies so that they can offer what there customers demand.

Be it the web or the ubiquitous mobile communication technologies that span from hi-end all-function cell phones to PDAs, MIDs and wireless or Wi - Fi enabled laptop devices, companies today need to deliver solutions that interact with all devices and interfaces.

This is where 9i comes in. 9i brings extensive and diverse hardware and software experience in the market place. The main strength of 9i lies in its technical expertise in making diverse technologies work seamlessly. 9i is focused on WTI, ETI, ERP, BI, SaaS & Web2.0 technology market segments.

9iSolutions service offerings span the range of IT. We deliver end-to-end solutions that can build, manage and support our customers' IT systems across the entire value chain — infrastructure, applications and business processes. We also manage projects on a turnkey basis.

The range of our offerings extends to software (including systems and application software development, implementation, maintenance and frameworks), IT architecture, Business consulting and IT-enabled processing services.

This depth, diversity and delivery capability ensures adaptability to client needs, bringing out the most innovative solutions in every business and technology domain.

9i differentiates its solutions and services offerings into 4 Strategic Business Units (SBU's)

- ❖ Enterprise Business Intelligence Services (EBIS)
- ❖ Web Technology Integration (WTI)
- ❖ Mobile & Embedded Technologies (mVertical)
- ❖ ERP technology Integration (ETI)

The Four SBU's

❖ Enterprise Business Intelligence Services (EBIS)

Starting with the humble Data Mart, CMC has evolved a company wide business intelligence solution that has proved very popular.

In 2005, 9iSolutions leveraged its skills and expertise in data warehousing and online analytical processing (OLAP) marketing, and set up a focused data warehousing (DWH) and business intelligence (BI) practice, which has been since extended to the entire ASEAN. We are now trying to build dedicated solutions in industry verticals - like manufacturing, pharmaceuticals, banking, automobiles, government, semiconductors and utilities.

We have built a solid foundation for 9iSolutions's future growth in this area by establishing strategic, mutually rewarding business relationships with two major OLAP and BI vendors. Our growing customer base reflects our commitment to customer satisfaction, and success in converting each new client into a long-term business partner.

9iSolutions has implemented DWH solutions at multiple sites, using data from servers worldwide. Our solutions started out as small data marts and grew to company-wide data warehouses. This stepwise implementation allowed early deliverables and better user acceptance.

Platforms used included workstations and servers from Sun, SGI and HP, Windows NT servers, Windows 95 / 98 and Mac clients. We bring in not just technical skills, but rich experience in application areas like marketing, sales, human resources, finance, etc. The DWH and BI practice is constantly growing, enabling us to provide focused consulting and design services to the business intelligence world.

Services

- Complete analysis of functional needs
- Data mart and data warehouse design, using data modeling techniques
- Data warehouse creation at multiple sites from multiple servers
- 'Jump-starting' client projects with our in-depth knowledge of Business Objects, Cognos, Microsoft SQL Server – Business Intelligence, Informatica and Data Stage
- Web enabling of data warehouses and complimentary reporting
- OLAP tool implementations on the web
- Single sign on, using LDAP and web servers
- Expertise with databases such as Oracle, SQL Server, Sybase, DB2, Informix and Teradata
- Integration with enterprise resource planning (ERP) solutions such as SAP, Oracle, etc
- Integration with eCommerce to build near-real-time data warehouse access
- Integration with customer relationship management (CRM) tools such as Siebel, Clarify and Oracle CRM.

Experience

Our value proposition is based on 9iSolutions's vast experience in providing design, development, enhancement, maintenance, and support services to several of its clients across diverse function and technological areas:

- Strong data warehousing and business intelligence practice within the organization
- Availability of a strong knowledge base and experience in data warehousing projects
- Availability of a large resource pool to meet flexible resource demands
- Partnership with leading data warehousing companies

❖ Web Technology Integration (WTI)

- Web Design
- Content Management
- Knowledge Repository
- Intranet
- Mobile call functions
- Migration of database

9i offers application and product development services in the areas of web technology integration in the following domain areas.

- Mobile Platform
- Banking
- Finance
- Entertainment
- M-Commerce
- Software Defined Radio
- Credit Card Transaction
- IPTV
- Bio Informatics

The company has a sound knowledge base in both Microsoft based technologies and open-source based technologies.

❖ Mobile & Embedded Technologies (mVertical)

With the maturation of technology embedded software applications hold a great amount of value for communications and users who use high-tech products. The embedded technologies of today enable greater device intelligence, broad and focused utility, quick response, demand more accountability and also serve as product and service differentiators in a competitive market. Embedded software and hardware is a key enabler of trends such as mobility, RFID, wireless home networking, and anywhere-anytime intelligence.

In the mobile phone and the palm-held age, embedded software plays a crucial role in product differentiation and also in the offerings that service providers offer. As the market continues to mature, more sophisticated features and functions are needed to differentiate products and services a company offers vis-à-vis its competition. That means software is more important than ever and this is where 9i steps in.

IcT (Information Communication Technologies) is a particularly strong area of 9i and it can deliver solutions ranging from the nanosecond changing to the micro millimeter traversing on any communication device – desktop or hand-held. 9i's services and solutions in the area of Embedded Technology Integration in the following domain areas.

- Bio-Technology IcT
- Industrial IcT
- Aerospace IcT
- Bio-technology
- Mobile platform

❖ ERP technology Integration (ETI)

Implementing an enterprise wide ERP integration technology has benefits that are well documented. A well developed and implemented ERP technology integration framework helps to lower the total cost of hardware and software ownership by more than one third through reduced development inputs, faster integration of new applications, lesser number of interfaces required, elimination of redundancy and low maintenance costs.

The benefits of a well implemented ERP technology integration framework include increased revenue from better streamlining of all vendors; reduced costs by streamlining operations and rationalizing present and future IT investments; increased efficiency from automation and availability of relevant data on-demand; lessened risk by efficient streamlining of IT investments; improved productivity due to better employee participation and accountability and increased customer happiness and retention resulting from better service. 9i has the track record and the expertise to work, develop and expand your ERP investments in the following areas.

- Purchase
- Sales
- Inventory
- Production Planning
- Control
- Operation
- Financial Accounting
- Training Management
- Human Resources

9i can develop new functions and integrate them with your existing ERP solution so as to minimize costs and maximize the returns you invest in Information Technology.
